COMPARABLE COMMODITY STATISTICS OF
PRODUCTION, IMPORTS AND EXPORTS, AUSTRALIA : 1975-76
Goods Originating in Manufacturing Industries

PREFACE

This bulletin presents the first comparable Australian production, import and export commodity statistics of manufactured goods, classified in accordance with the first edition of the Australian Standard Commodity Classification (ASCC). The statistics and the classification relate to the year 1975-76.

The ASCC, and the statistics compiled in accordance with it, were developed by the ABS to improve the usefulness of Australian commodity statistics for government and private organisations in applications such as analysis of the relationship between employment, industrial structure and tariff provisions, studies of import competition and replacement, the estimation of market shares, etc. However, the ASCC which governs the commodity content of this bulletin is still subject to considerable long term development and improvement, particularly in the direction of extending the range of commodities covered and improving the degree of comparability between equivalent production, import and export commodity items.

Accordingly, as the ASCC is further developed and improved over time, so will the statistics compiled in accordance with it. Further, some difficulties were encountered in presenting the figures in this bulletin, particularly in the combination of commodity items to prevent disclosure of confidential data. In tackling these and other problems of data presentation, this bulletin should be regarded as still somewhat experimental and the views of users on ways of improving their presentation would be welcome.

EXPLANATORY NOTES

INTRODUCTION

This bulletin presents the first comparable Australian production, import and export commodity statistics of goods originating in manufacturing industries, classified in accordance with the first edition of the Australian Standard Commodity Classification (ASCC). The statistics and the Classification relate to the year 1975-76.

2. The publication of this bulletin represents a further step by the ABS in meeting long stated needs for comparable production and overseas trade commodity statistics. As a first step in meeting these requirements the ABS developed and published in 1978, the first edition of the ASCC (1207.0).

3. These long stated needs relate more specifically to the use of comparable commodity statistics by government and private organisations in applications such as analysis of the relationship between employment, industrial structure and tariff provisions, studies of import competition and replacement, submissions to the Industries Assistance Commission, the estimation of market shares, the compilation of input-output tables and the conduct of trade and tariff negotiations, e.g. within the framework of GATT (the General Agreement on Tariffs and Trade).

PRESENT STATUS AND FURTHER DEVELOPMENT OF THE STATISTICS

4. The first edition of the ASCC and the statistics compiled in accordance with it go some way towards meeting the aims mentioned above. However, the ASCC, which governs the commodity content of this bulletin, is still incomplete and subject to considerable further long term development.

5. For example, its present coverage is restricted to manufactured commodities only, that is, goods typically produced by manufacturing industries as defined in the 1969 edition of the Australian Standard Industrial Classification (ASIC). Further, the degree of comparability between equivalent production, import and export commodity items, as presented in the first edition of the ASCC (and hence in this bulletin), is very broad and indistinct in a large number of cases because in developing the ASCC to date it has generally not been possible to change existing production, import and export commodity items to improve comparability between them.

6. Accordingly, further long term development of the ASCC, currently under way, will concentrate on improving the ASCC in terms of modifying the relevant classifications (i.e. the list of manufactured articles produced, the Australian Import Commodity Classification (AICC), and the Australian Export Commodity Classification (AEEC)) in ways designed to increase the degree of comparability between the production, import and export commodity items

contained in them. Additional scope coverage of the ASCC is to be extended over its work to goods produced by other industries such as agriculture, forestry and mining. This in turn will mean that corresponding improvements in the detail and range of commodity statistics will occur in subsequent editions of the commodity statistics bulletin based on the ASCC.

ASCC CATEGORIES

Industry of origin categories

7. The industry of origin categories in this bulletin are the broadest or most summary headings of the ASCC. They represent the industries in which the commodities, listed under them in the form of standard items, typically originate - i.e. the industries in which the commodities are mainly or typically produced. This method of ordering and presenting commodities reflects the "industrial origin" structure of the ASCC.

8. The industry of origin categories in the ASCC, and in this bulletin, are based on the industries in the 1969 Preliminary Edition of the Australian Standard Industrial Classification (ASIC).

9. It is important to note that in an industrial origin commodity classification such as the ASCC, each individual commodity item is shown only under one industry of origin heading - the industry in which the commodity typically originates.

10. In practice, of course, many commodities are produced not only by their "conventional" industry of origin but by other industries as well. An industry of origin commodity classification should not therefore be confused with a cross classification of commodities by industry of production. The latter would list, under each industry, all the commodities which are actually produced in the industry, so that an individual commodity would be shown under all the industries in which it is actually produced.

11. In most cases each ASCC industry of origin category is equivalent to an industry class in the ASIC. However, in some cases, two or more ASIC classes have been combined for purposes of the ASCC to form a special combined class, i.e. a single industry of origin category. This has been necessary where many standard (ASCC) items contain commodities originating in two or more ASIC classes.

12. The industry of origin categories are identified by 4-digit code numbers. Where an industry of origin category is equivalent to an industry class in the ASIC the 4-digit code number in the ASCC and this bulletin is that of the ASIC class. Where an industry of origin category represents a combination of ASIC classes a 4-digit code not used anywhere in the ASIC has been adopted. All instances of this kind are listed in the Appendix.

Standard items

13. Standard (ASCC) items, as contained in the ASCC manual, and according to which statistics are shown in this bulletin, have been formed from detailed production, import and export items and represent the most detailed common groupings of production, import and export items.

14. Thus, standard item 2171.02, "Molasses" has as its components: production item 102.75, Molasses, import item 061.50.00, Molasses, whether or not decolourised, and export item 061.50.00, Molasses. However, in a large number of cases standard (ASCC) items are more broadly defined so that each one covers a number of production, import and export commodity items. For example, standard item 3138.16, "Flexible tubing and piping of base metal" has as its components the following items:

Production items:

- Flexible metal tubing (ferrous and non-ferrous):
- 469.11 - Covered or lined
- 469.13 - Not covered or lined

AICC items:

- Flexible tubing and piping, of base metal:
- 698.82.01 - Interlock type
- 698.82.02 - Square-lock type
- Corrugated (convoluted) type:
- 698.82.04 - Not exceeding 51 mm internal diameter
- 698.82.05 - Other
- Bellows, expansion joint:
- 698.82.07 - Not exceeding 152 mm internal diameter
- 698.82.11 - Other
- 698.82.19 - Other (including wholly or essentially of spirally wound wire)

AECC items:

- 698.82.00 Flexible tubing and piping of base metal

15. It should be noted in both examples above that the standard (ASCC) items represent the *most detailed common grouping* of production, import and export items - i.e. both are the most detailed items for which comparable statistics of production, imports and exports can be derived.

16. Standard items representing the most detailed common groupings of production, import and export items are identified by a 6-digit code (both in the ASCC and in this bulletin) with the first 4 digits identifying the industry of origin.

17. In many instances, however, more detailed comparability between either production and import items or production and export items has been possible within a 6-digit standard item. In these cases further standard items have been formed representing the more detailed categories, and these standard items are identified by an 8-digit code (the first 6-digits of which represent the code number of the 6-digit item).

18. More detailed information regarding the production, import and export items included in standard items can be obtained from the ASCC manual (1207.0). Statistics of individual production and trade commodity items included in a standard item may be obtained from the ABS publications *Manufacturing Commodities: Principal Articles Produced* (8303.0) and *Overseas Trade - Part I: Exports and Imports* (5400.0).

PRODUCTION, IMPORT AND EXPORT STATISTICS AND THEIR VALUATION

19. The data for production, imports and exports shown in this bulletin for each standard item relate to values only. (Quantity data are not included either because quantity details are not, or sometimes cannot be, compiled for all the production, import or export items of which the standard items are composed or because different units of quantity are used or are applicable to different component items of the standard items.)

20. Only the total production, import and export values are shown for each 6-digit standard item and, where appropriate, for the 8-digit standard items - except, of course, where the values for the standard items are confidential.

21. Production statistics in this bulletin exclude sales of commodities by single establishment enterprises employing less than four persons. Commodity sales statistics compiled from the Census of Manufacturing Establishments exclude statistics from these small enterprises since they contribute only marginally to statistical aggregates.

Basis of valuation of production

22. The values shown in the production column for each standard item are the values of sales and/or transfers out of commodities manufactured in Australia as reported in the 1975-76 Census of Manufacturing Establishments. The data may either represent sales and/or transfers out of commodities produced during the year, or sales and/or transfers out of commodities withdrawn from stocks.

23. Sales relate to transactions between different enterprises (e.g. companies) and the reported sales values exclude excise and sales tax. Transfers out relate to transactions between different establishments of the same enterprise (e.g. company). Goods transferred out from one establishment to other establishments of the same enterprise are valued, for statistical purposes, at commercial selling prices. Both sales and transfers out relate only to commodities produced by the reporting establishment or to commodities produced for it on commission from materials supplied by it. Sales and transfers out of merchandised goods are excluded.

Basis of valuation of imports and exports

24. All values in overseas trade statistics in this bulletin are determined on a 'free on board (f.o.b.) port of shipment' basis. This means that all charges (in particular the cost of freight and insurance) incurred

after the goods have been exported from the port of shipment are excluded. Only transport and service charges incurred, or usually incurred prior to export, are included in the determination of trade values.

25. The procedure adopted for value exports and imports is as follows:

Exports. The recorded value of goods exported includes the cost of the outside packaging and is determined as follows:

- (a) Goods sold to overseas buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price at which the goods were sold.
- (b) Goods shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are despatched for sale.

Imports. The recorded value of goods imported is the 'value for duty' as required for Customs purposes, that is, the sum of:

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
- (ii) the current domestic value of the goods, whichever is the higher, and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export.

In the case of goods consigned for sale in Australia the value for duty shall be the amount which would be the value for duty if the goods were, at date of exportation, sold to an Australian importer instead of being consigned for sale in Australia.

'Special deduction' is defined as, 'any discount or other deduction allowed to the Australian importer which would not ordinarily have been allowed to any and every purchaser at the date of exportation of an equal quantity of identically similar goods.'

'Current domestic value' is defined as, 'the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country.'

26. This basis of valuation of imports was replaced in 1976-77 by a new system based on the internationally recognised Brussels definition of value. Import statistics in subsequent editions of this bulletin will be based on this new method of valuation.

TREATMENT OF CONFIDENTIAL DATA

27. If the production, or import or export

component value of a standard item is confidential, the standard item has been combined - comparable with another standard item or items. This content has been made to combine standard items covering similar or related commodities. E.g. standard item 2184.01, 'Coffee, roasted' has been combined with standard item 2184.02, 'Coffee extracts, essences, concentrates and similar preparations of coffee' (Why? In brief, it was not suitable or practical to combine standard items, the standard item has been published with a footnote in the column of the confidential component indicating that the data is not available for publication. E.g. standard item 2311.02, 'Cotton linters').

28. Where a significant percentage of the total value of the production, import or export component of a standard item is confidential, no value is shown in the relevant column. Instead, a footnote is inserted in the column to indicate that some commodity item/s is/are confidential, and that the value of the non-confidential element is included in the footnote - e.g. standard item 2337.33.02 'Woolen yarn - Other'.

29. Where, however, the confidential items in the production, import or export component of a standard item do not account for a significant percentage of the total value, the value of the non-confidential element is shown in the appropriate column and a footnote is inserted against the figure to indicate that it excludes data for the confidential item/s - e.g. standard item 2313.05, 'Discontinuous or waste man-made fibres, carded, combed or otherwise prepared for spinning'.

FOOTNOTES

30. Four "common" footnotes (see below) are used in this bulletin to identify factors which occur frequently and which could affect the statistics and their comparability. They are:

- (i) The footnote with the symbol * which is used against the production value of a 6-digit standard item where the production statistic is deficient. The total production value may be deficient because in one or more of the related 8-digit standard items some production items may be confidential or statistics may not be collected for some of the commodities. For example, in standard item 2337.17, the production component of \$54.8m is deficient by the value of the production items of standard item 2337.17.05 because they are confidential, and by the value of the production statistics for accessories for blinds and curtains of textile materials relevant to standard item 2337.17.07 because statistics are not collected specifically for these commodities. The nature of the deficiencies is explained in specific footnotes in the relevant 8-digit standard items. Where the deficiencies account for a significant percentage of the total production value, to avoid possible confusion no figure is shown in the production column because in these situations, valid comparisons with the trade statistics would not

be possible. However, for the information of the user, the value of the available and non-confidential component of the standard item is contained in the body of the footnote (e.g. standard item 2337.09).

(ii) The "complete production gap" footnote denoted by the symbol *, this footnote is used in the production column to indicate that production statistics are not collected specifically for any of the commodities covered by the standard item, due to gaps in the coverage of "specified" production items. ("Partial production gap" situations - i.e. where production statistics are not collected specifically for only some of the commodities covered by the standard item, are covered by specific, individual footnotes in the bulletin.)

(iii) A footnote with the symbol + is used in one of the trade columns of an 8-digit standard item to indicate that data is available only at the broader 6-digit item level. For example, in standard item 2337.02, where more detailed categories are provided between production and imports at the 8-digit level, the symbol + is shown in the export column of 2337.02.01 and 2337.02.02 to indicate that the comparable export statistics for these commodities are available at the 6-digit level only - i.e. for standard item 2337.02.

(iv) The "duplication" footnote, with the symbol ** which is shown against the title of a standard item informs users of possible duplication in the standard item and advises them to exercise caution when comparing details of production and trade. A standard item could involve duplication in that, for example, the parts of a commodity could be covered by its production and import statistics and the complete commodity made from the parts could also be covered by production statistics of the standard item (e.g. standard item 2912.18).

31. Apart from these "common" footnotes, other specific footnotes are used in the bulletin.

32. In the bulletin all the various factors which could affect the content and comparability of the statistics have not been footnoted - provided generally valid comparison of the data has not been jeopardised. For example, in the bulletin the statistics in some standard items have not been footnoted to indicate that they include the statistics of some commodities which belong to some other standard item - i.e. the 'surplus' footnote referred to in the ASCC manual. This was done because these 'surplus' and their corresponding 'deficiency' situations are numerous and not considered significant enough to affect valid comparisons between the data.

33. For a complete record of the various factors affecting the content and comparability of commodities as contained in the standard items, reference should be made to the ASCC manual.

FACTORS WHICH INHIBIT THE COMPARABILITY OF THE DATA

34. There are various factors which can affect the comparability of commodity statistics in production, imports and exports compiled according to the ASCC. These factors can generally be considered to fall into the following broad categories:

- Classification problems.
- Other problems.

Classification problems

35. Problems in this category arise due to the inherent differences between the production and overseas trade commodity classifications. Due to differences in the definitions of commodities in the three commodity classifications on which the ASCC is based, complete comparability between equivalent production, import and export items has not been established in a large number of instances. The partial, incomplete or very broad comparability achieved in these instances is, naturally, reflected in the statistics.

Other problems

36. This second category of problems involves issues which cannot usually be solved by improving the ASCC or its related classifications. In the main, these problems include the following:

- VALUATION. One of the main problems in comparing data from the three sources is the differences between the methods of valuation as described above, particularly in connection with transport costs, excise costs, merchants' margins, etc. For example, export values may be greater than production values because of the addition of packaging, insurance and transport costs to the point of export and because of the exporters' trade margin.
- TIME LAGS. Difficulties in comparing statistics from the three sources sometimes arise due to the time lags that occur between producers' sales and transfers out and export. Time lags of this nature can be heightened by significant fluctuations in stocks held by merchants.
- DUPLICATION. Some standard items contain duplication in that the production and import statistics cover certain components while the production statistics could also cover the complete goods made from the components. In this type of situation assessments of and comparisons between statistics from the three series become problematical.
- LIMITATIONS IN SCOPE OR COVERAGE OF STATISTICAL COLLECTIONS. Problems in comparison also arise due to limitations in the scope or coverage of the statistical collections which are the source of the statistics being compiled according to the ASCC. For example, the exclusion of commodity sales statistics by single establishment enterprises employing less

than four persons, lack of statistics on sales of commodities produced by manufacturing establishments on commission for non-manufacturing establishments, and of production of manufactured commodities by non-manufacturing establishments. Where this occurs, export values could be significantly greater than production values.

DIFFERENCES IN QUALITY, ETC. Difficulties also arise from factors such as differences in quality, material composition, substitutability of commodities, variations in the import component of goods produced in Australia or exported from Australia, etc.

Where figures have been rounded, any discrepancies between sums of the component items and totals shown may be due to rounding.

COMMON FOOTNOTES

- * Production data deficient. For details see footnotes for related eight digit items below.
- † Data not collected for these specific commodities.
- + Not available separately/included in previous figure.
- ** Some of the commodities included in this ASCC item may be used in producing other commodities also included in this item. Caution should therefore be exercised when comparing details of production and overseas trade for this ASCC item.

 (b) Excludes value for oxygen-function aldehydes and cyclic polymers of aldehydes (except formaldehyde, paraformaldehyde, vanillin and ethylvanillin) which are not included in specific production items.
 (c) Excludes value for methyl acetate, methyl methacrylate, vinyl acetate, isopropyl myristate, methyl acetate, ethyl acetate, propyl acetate, amyl acetates, butyl acetate and ethyl formate; and oxygen-function carboxylic acids (except acetylsalicylic, tartaric and salicylic ethylene glycol monomethyl ether acetates; esters of monocarboxylic acids, (except butyl acrylate, dinocap, ethyl acrylate, acetates, amyl acetates, butyl acetate and ethyl formate); and oxygen-function carboxylic acids (except acetylsalicylic, tartaric and salicylic acids) which are not included in specific production items.
 (d) No production value is shown for this ASCC item because chromium oxides and hydroxides (except chromium green oxide) are not included in specific production items and the value of the remaining production item is nil.
 (e) Excludes value for chlorites and hypochlorites (other than sodium or calcium hypochlorite) which are not included in specific production items.
 (f) No production value is shown for this ASCC item because sodium sulphides (except sodium sulphide 100% Na₂S) are not included in specific production items and the value of the remaining production item is nil.
 (g) Includes value for ASCC item 2716.22.
 (h) Excludes value for sodium pyrosulphate and persulphate which are not included in specific production items.
 (i) The production value of this ASCC item is not shown because component production item, 408.05, is confidential. Also excluded is the value for sodium silicates (other than sodium silicate and metasilicate) which are not included in specific production items. The value of the remaining production items, however, is \$3,015,000.
 (j) Excludes value for synthetic organic products of a kind used as luminophores which are not included in specific production items.
 (k) Excludes value for tanning derivatives for other than use as tanning agents which are not included in specific production items.
 (l) Includes value for ASCC item 2716.17.
 (m) Excludes value for lead oxides other than red lead or litharge; luminophores; pigment intermixtures and preparations; pigments diluted with an extender and preparations; preparations of pigments, which are not included in specific production items.

(a) The production value of this ASCC item is not shown because component production items, 452.20 and 452.50, are confidential. The value of the remaining production item, however, is \$1,199,000.

(b) Excludes value for production item, 452.42, which is confidential.

(c) ASCC item 683.20.00 which includes both worked shapes and sections of nickel and nickel alloys (relevant to ASCC item 2928.10) and nickel powders and flakes (relevant to ASCC item 2932.01) was included in ASCC item 2928.10 in the ASCC manual. However, it has since been discovered that the major proportion of the value of 683.20.00 is from powders and flakes. Therefore, in this bulletin, the value of export item 683.20.00 is included with the export value of ASCC item 2932.01. Therefore, the export value for 2928.10 is deficient by the value of worked shapes and sections of nickel.

(a) Includes value for generating sets consisting of the non-automotive generator, alternating current, and its prime mover mounted (or designed to be mounted) together as one unit or on a common base, which are not included in specific production items.

(b) Excludes value for production item, 503.19, which is confidential.

(c) Excludes value for production item, 683.21, which is confidential. Also excludes value for audio input and high frequencies type transformers, which are not included in specific production items.

(d) Excludes value for production items, 523.31 and 523.33, which are confidential. Also excludes value for wire, rods, tubes, plates, electrodes and similar products of base metal or of metal carbides for soldering or brazing, which are not included in specific production items.

(e) Excludes value for industrial or laboratory electric induction and dielectric heating equipment and parts therefor; and parts for electrothermic and oxy electric arc cutters, electric soldering irons, electric soldering machines and electric brazing machines, which are not included in specific production items.

(f) This figure includes the export value of ASCC item 3321.04.

(g) Excludes value for parts for relays (not being telephone and telegraph devices), which are not included in specific production items.

(h) Excludes value for voltage regulators for internal combustion engines (except motor vehicle engines) and parts for switchgear (for use at voltages exceeding 1,000), which are not included in specific production items.
